### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The specific limitations of

"wherein the centering part of the piston pressing member is formed into the shape of a cylindrical cap that is opened downwardly and has a notch part defined by cutting off a part thereof so as not to come into contact with the connecting rod of the piston, and a tapered inner wall surface that is widened downwardly so as to come into contact with the upper end edge of the piston"

are not anticipated or made obvious by the prior art of record in the examiner's opinion.

For example, US 5,435,056 to Liechty et al shows the concave piston receiving base and piston ring expander, but Liechty et al fails to disclose the centering pressing member in the form of a cylindrical cap with a notch cut out for avoiding the piston connecting rod. Liechty et al uses a carousel (8) where each piston is bolted to its own mounting assembly which must each be individually centered every time it comes around to lower a piston on to the ringing base. US 3,707,027 to Davis et al teaches using a cone shape to center a piston into the borehole of an engine, but fails to disclose a notch for avoiding the piston connecting rod. Said notch is novel in the Examiner's opinion with respect to it allowing for a single centering part to be used with the carousel of piston members without having to disassemble the mount to free the piston, thus eliminating a separate mounting and centering part for each piston.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
